

# Spheres, Cones, Cylinders and Cubes

Math games to  
reinforce three  
dimensional shapes

# Sphere, Cone, Cylinder and Cube Concentration

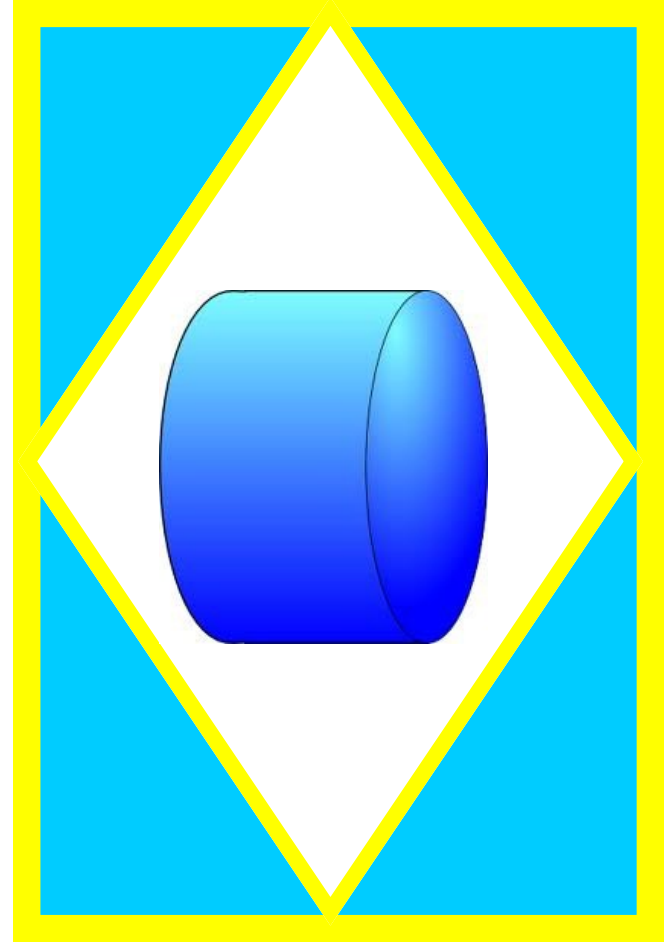

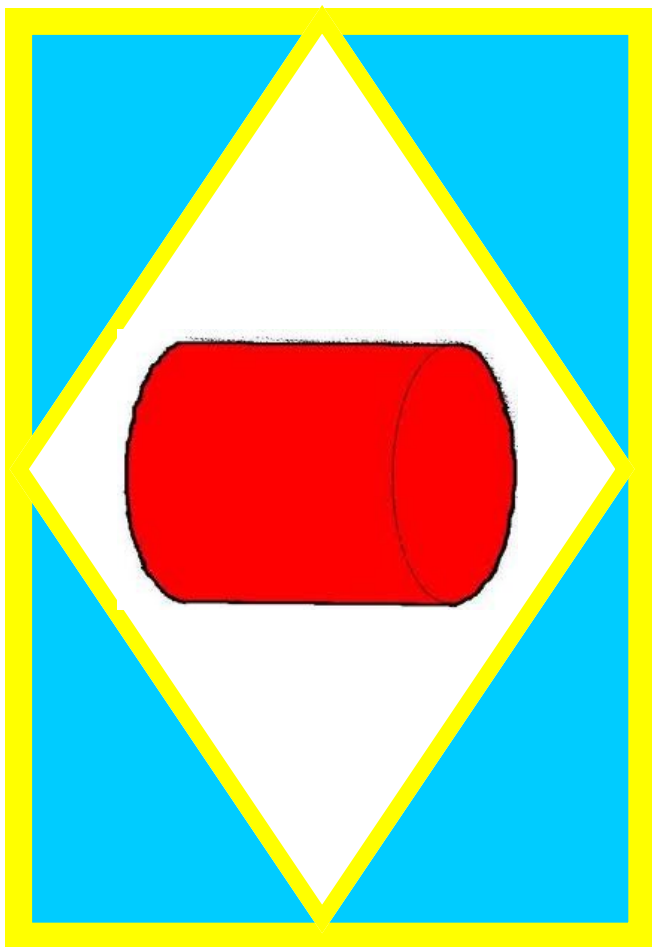

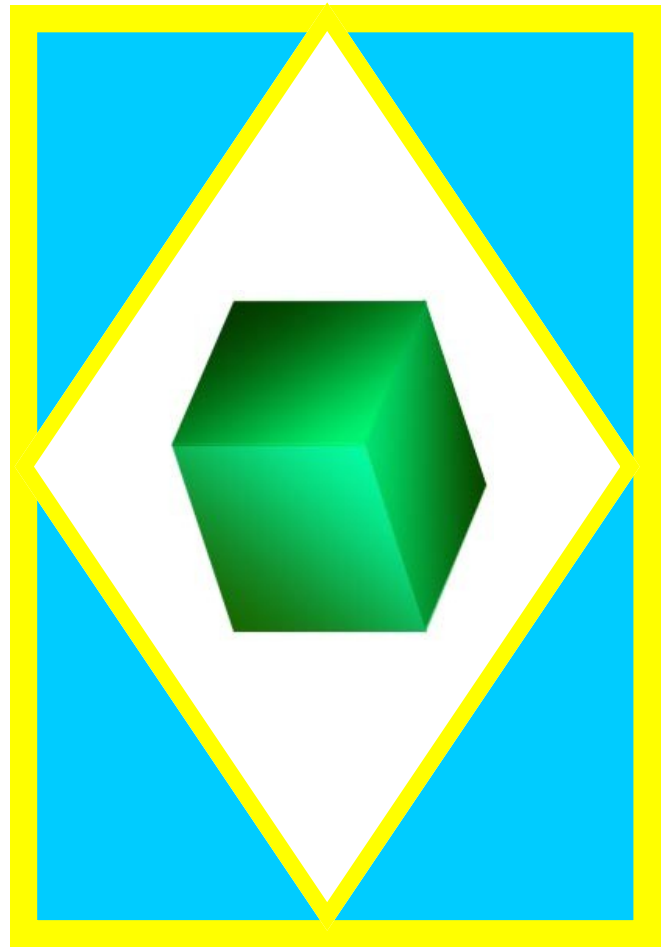

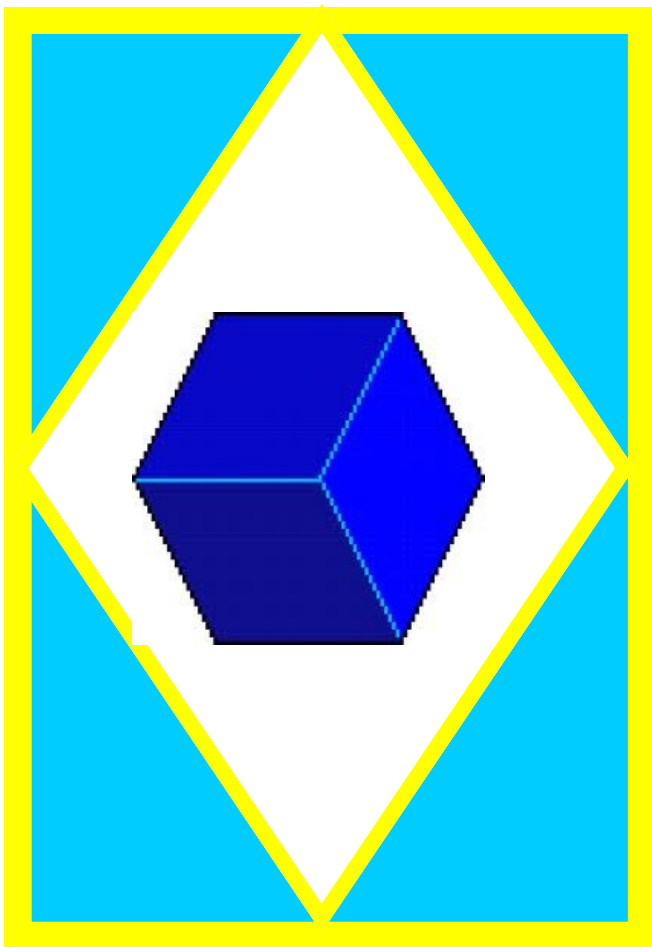

On the next four pages you will find cards containing three dimensional shapes and real world three dimensional shapes.

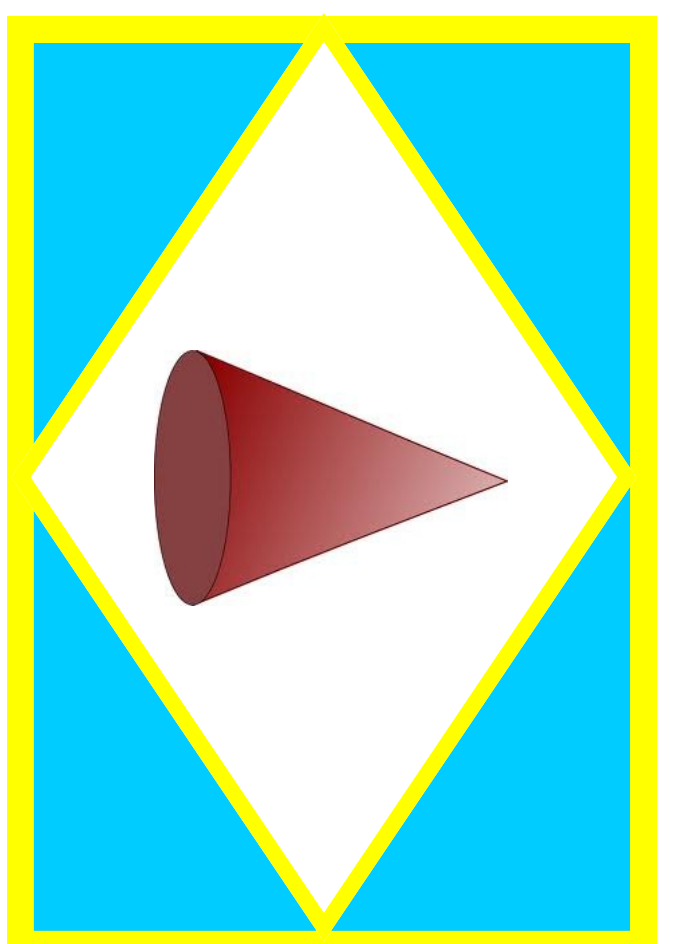

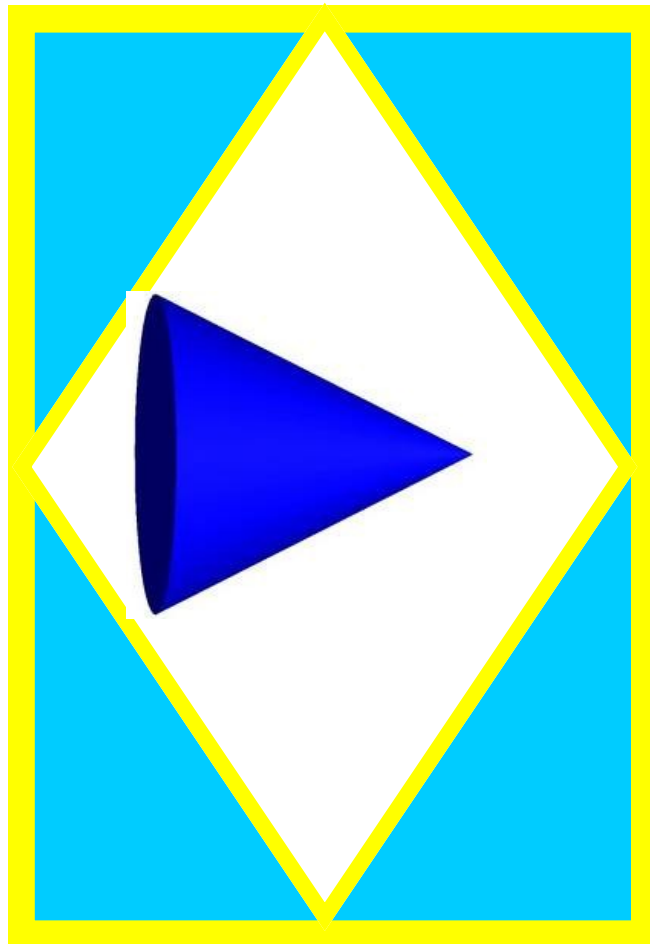

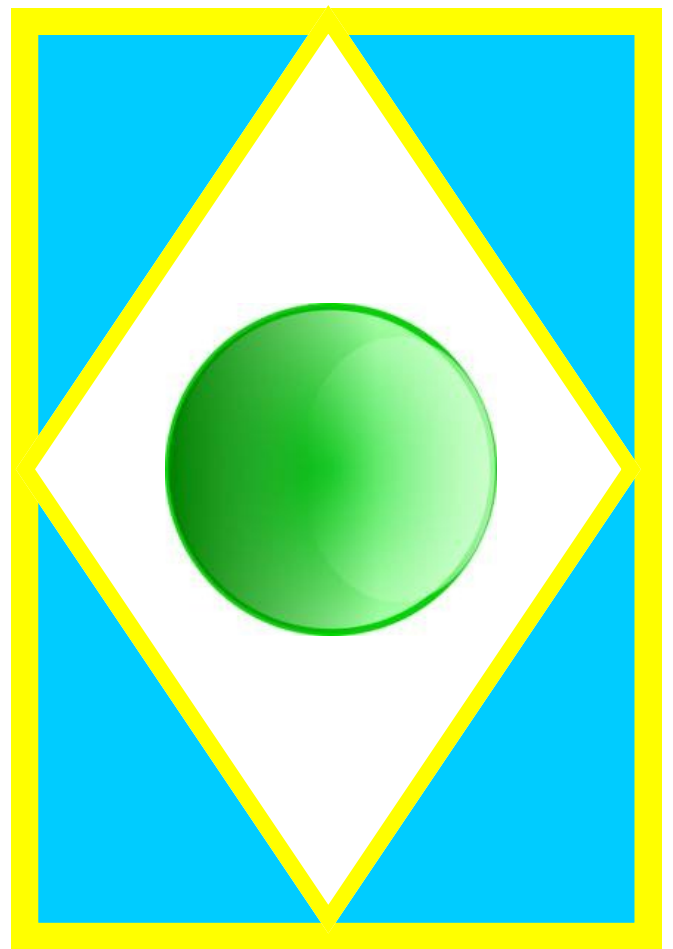

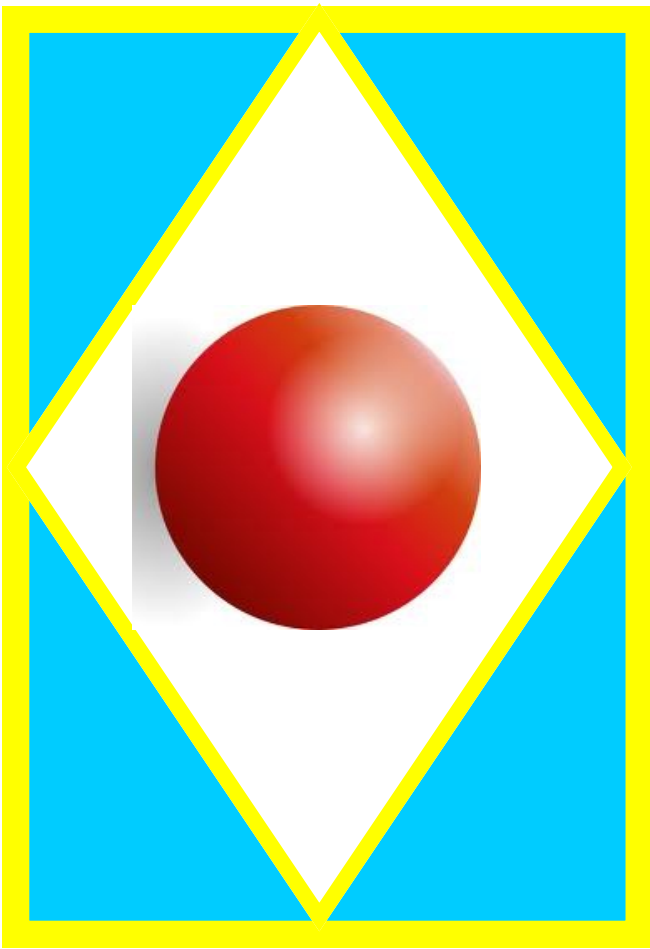

Students can play this game in a small group. Start the game by placing all cards face down. They then take turns turning over two cards. When the two cards turned over are a shape card and a matching real world picture the student gets to keep the cards. If they do not match ,they turn the cards face down and it is the next persons turn.

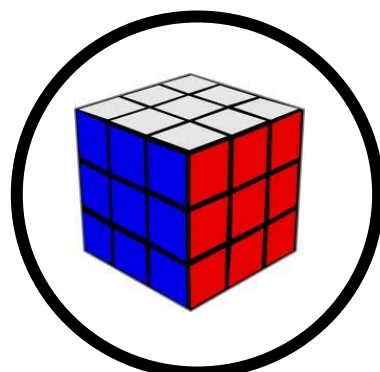

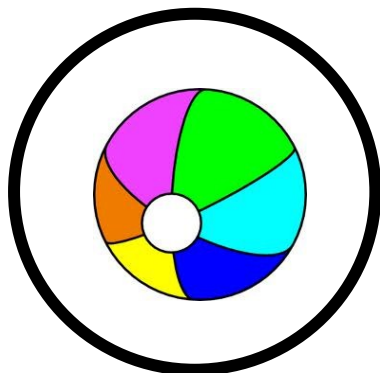

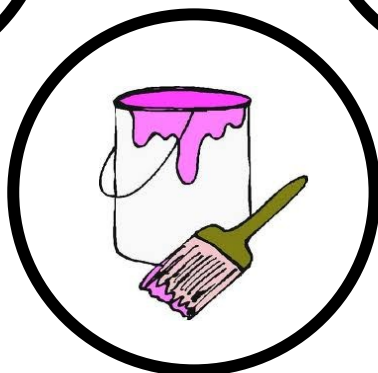

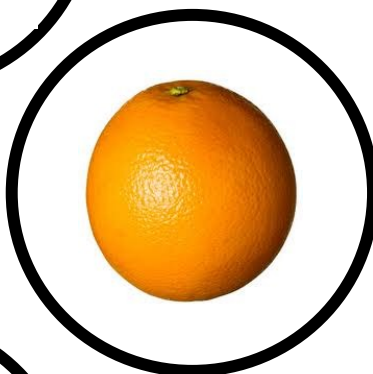

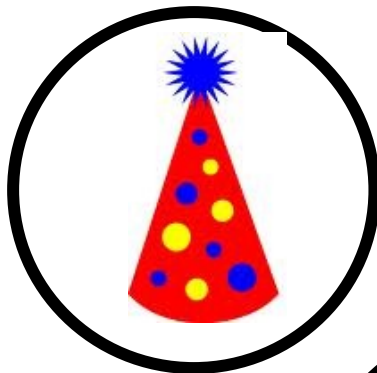

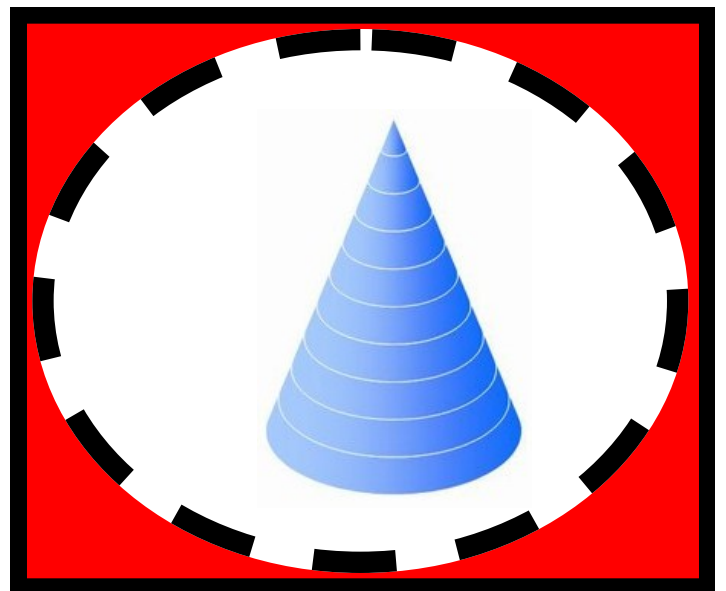

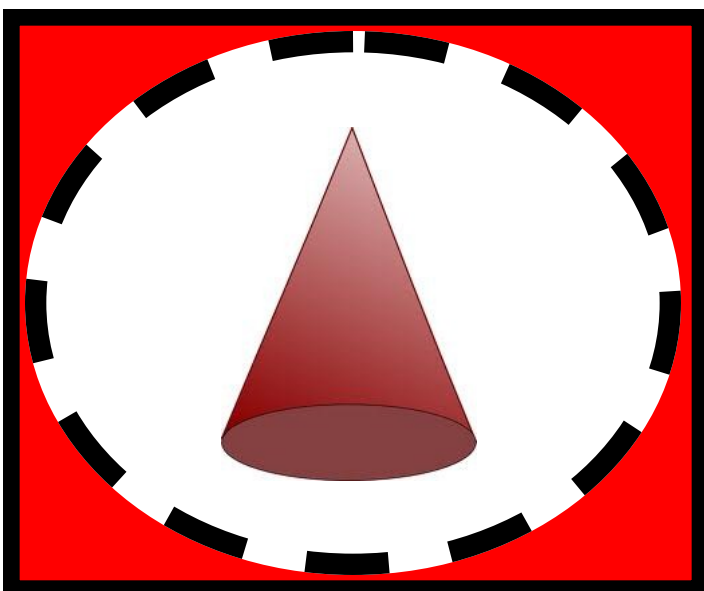

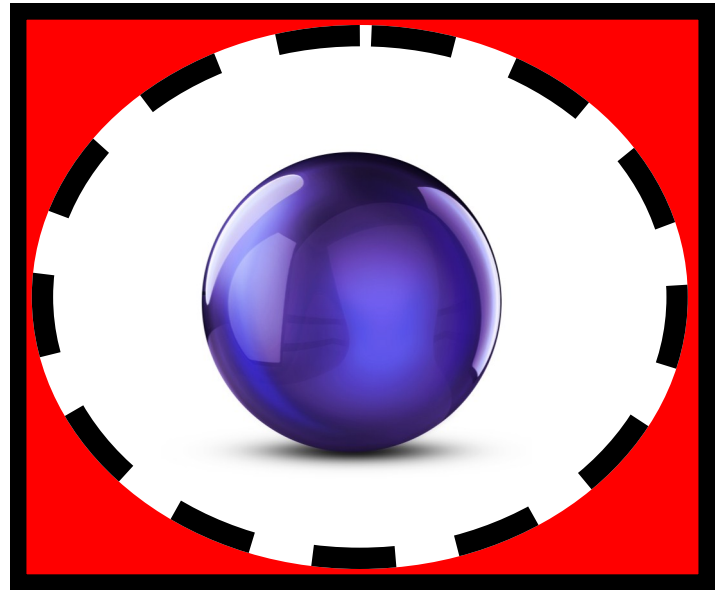

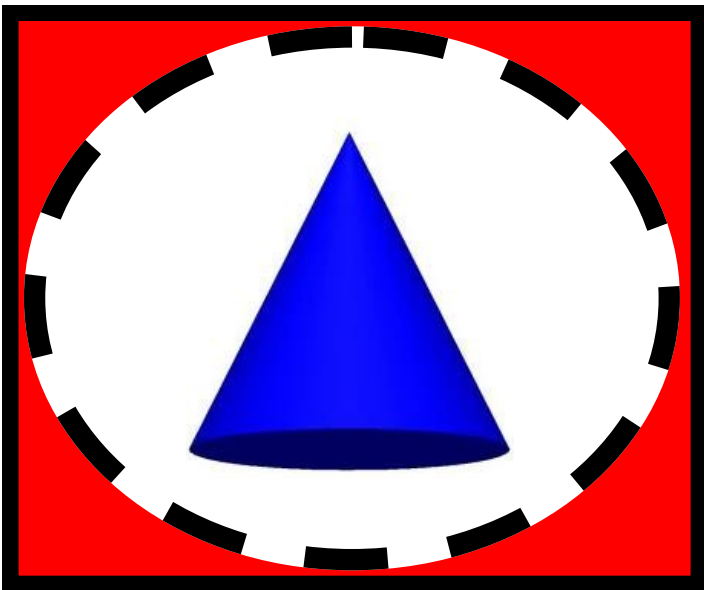

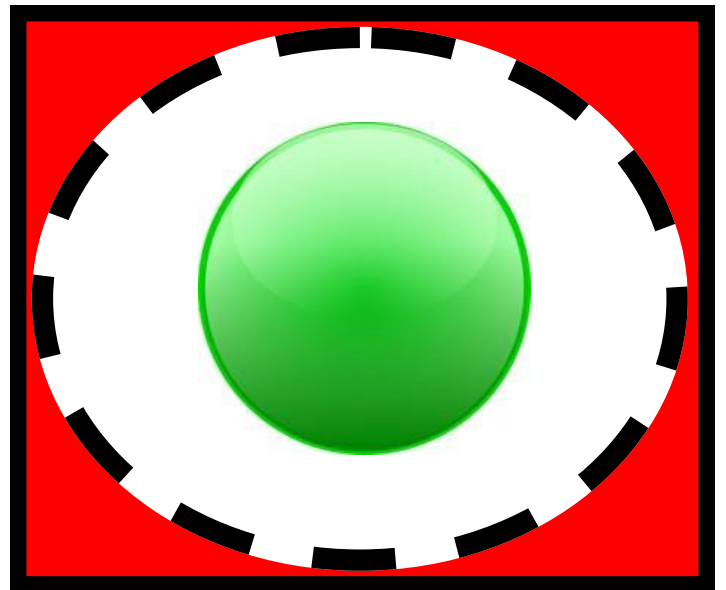

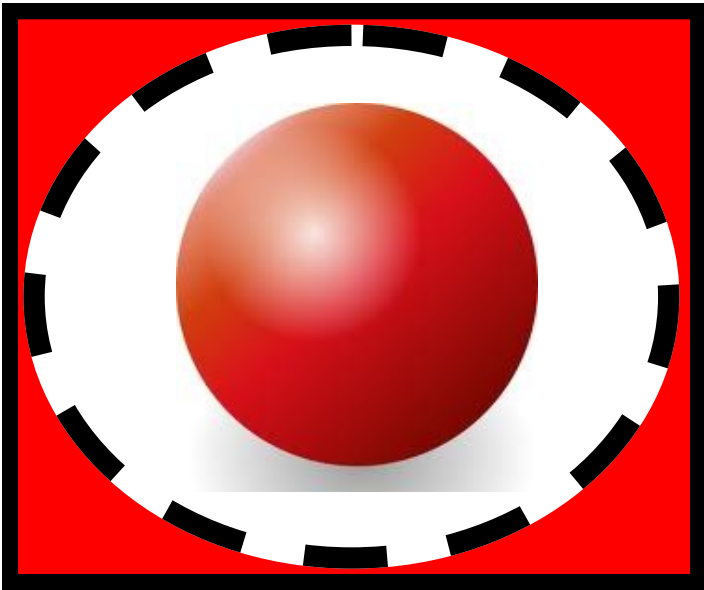

## Find The Shape

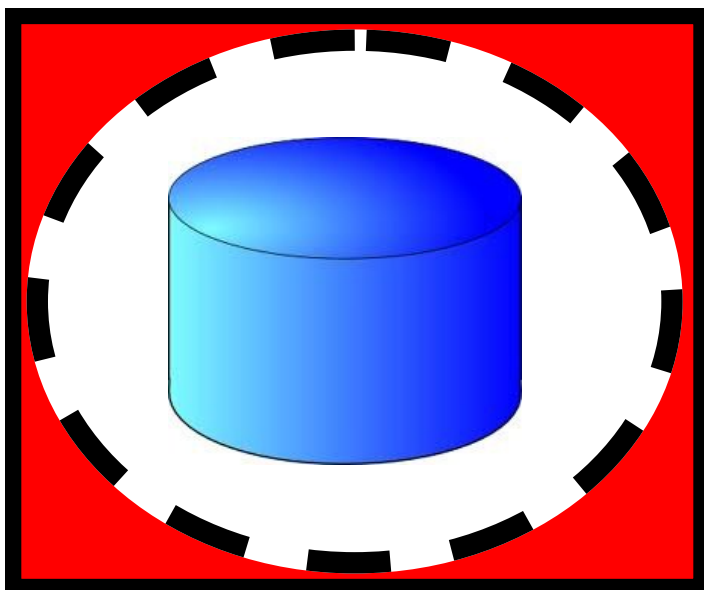

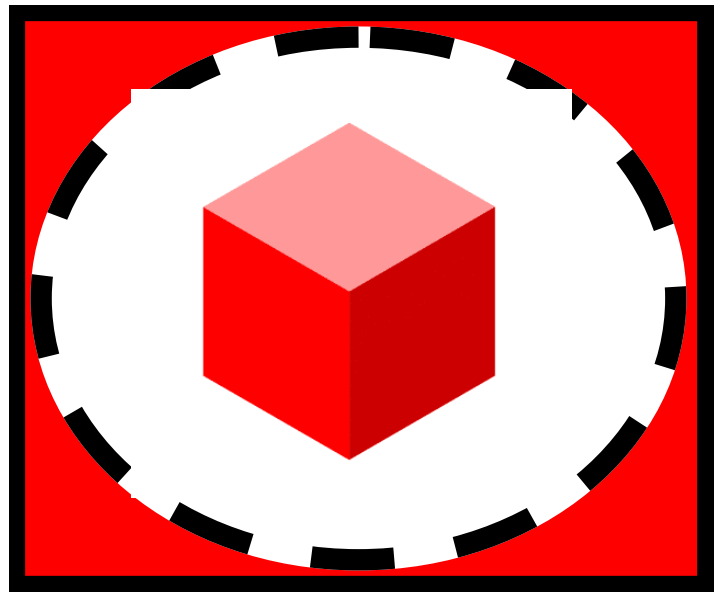

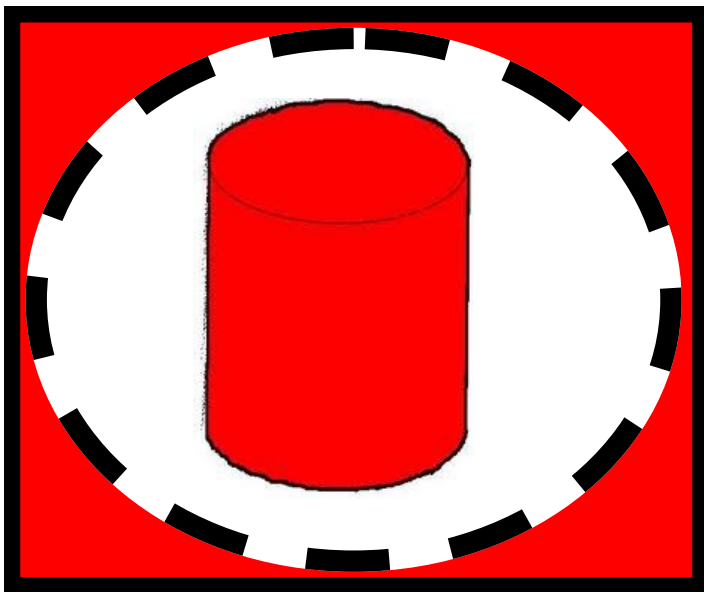

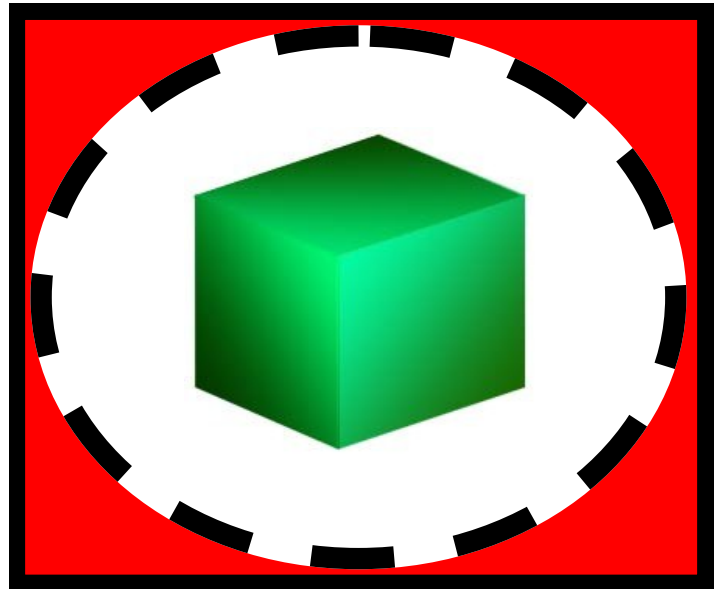

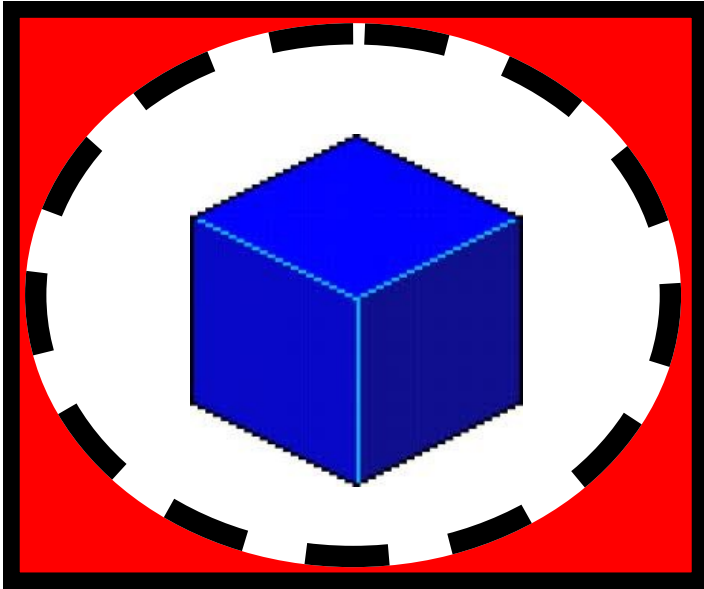

Each student should have a real world shapes recording sheet and a set of cards. The students starts with the cards face down. They draw a card and find a picture on their recording sheet that matches the shape. They cover the shape with a marker and choose another card. When all cards have been turned over the shapes on the recording sheet will all be covered.

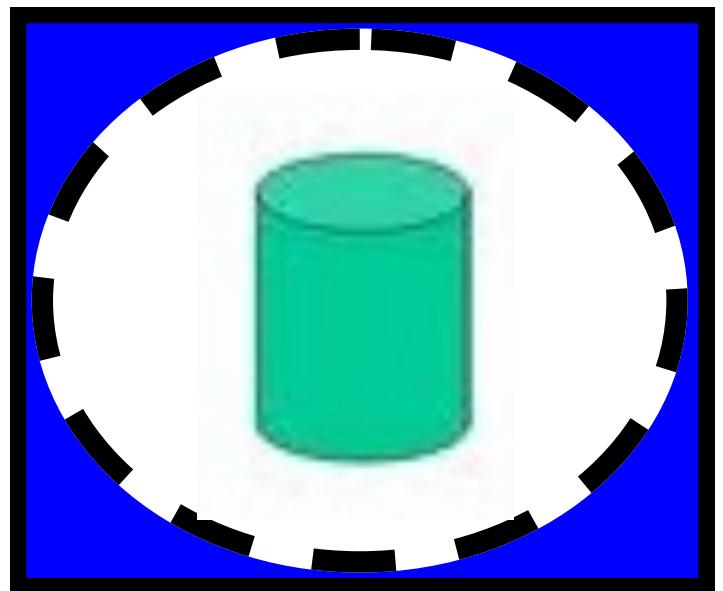

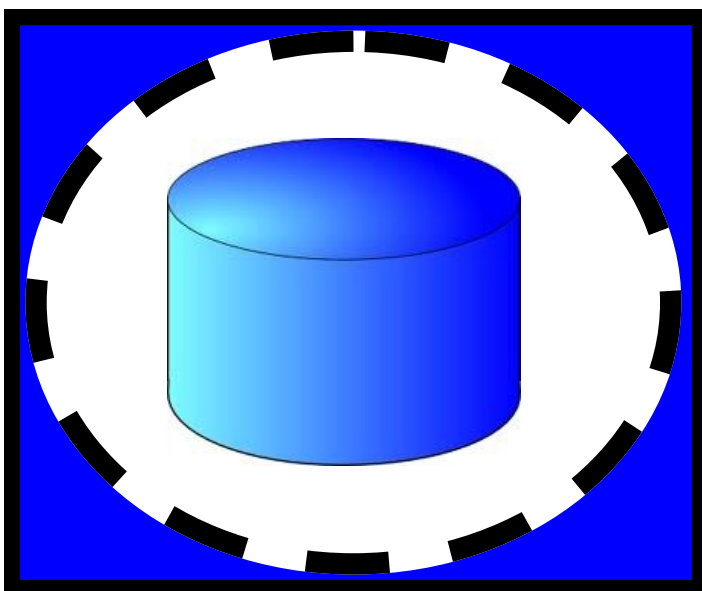

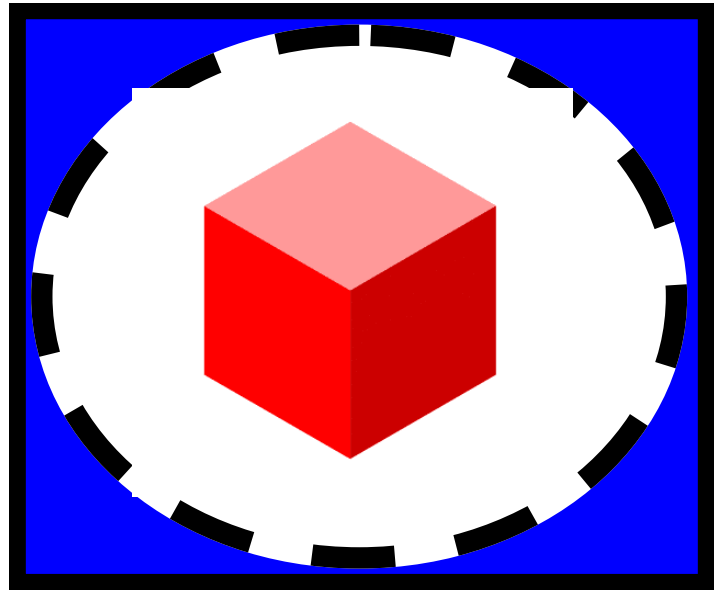

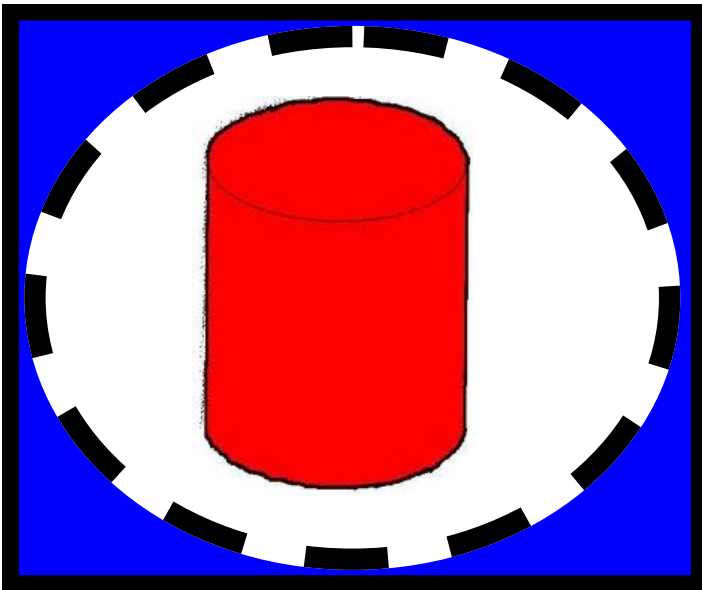

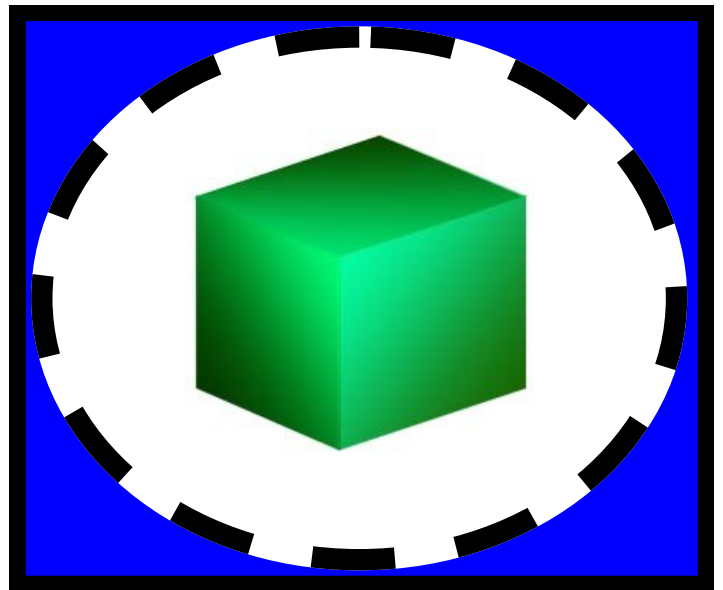

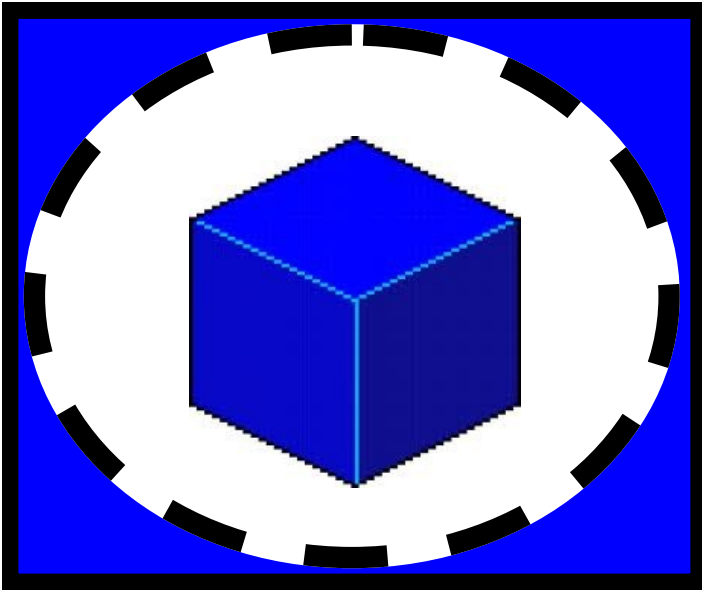

There are four sets of cards so four students can play the game and keep their cards separated.

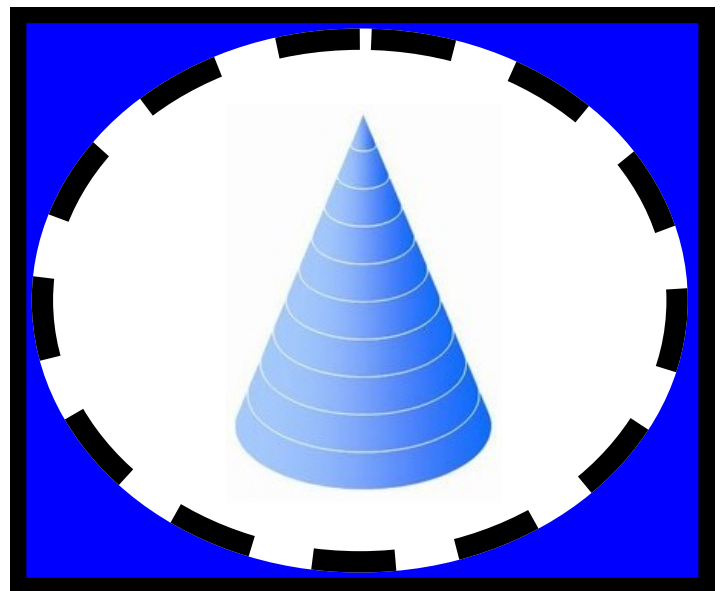

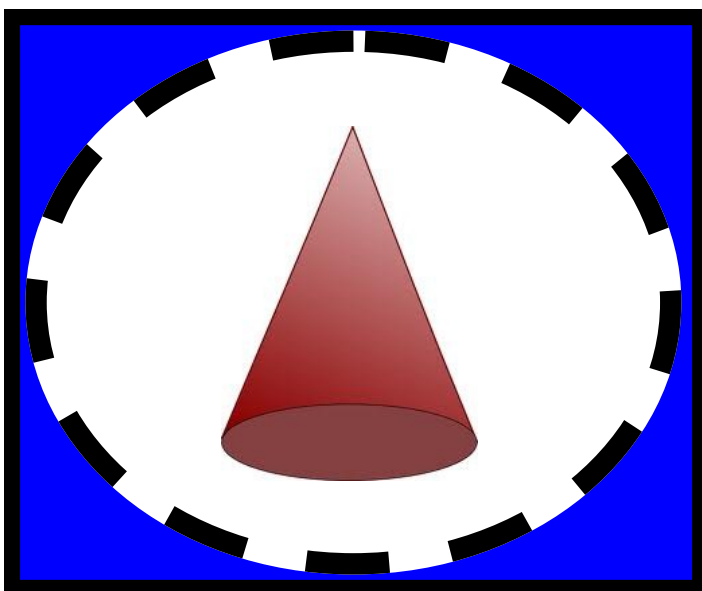

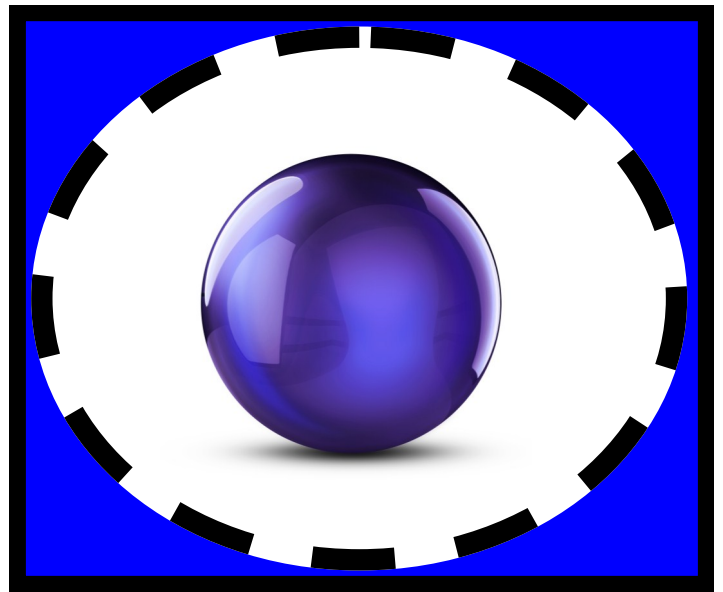

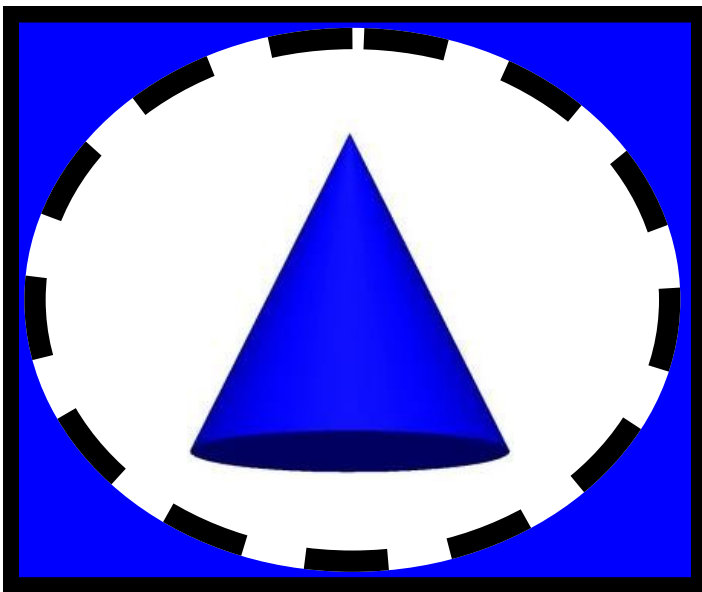

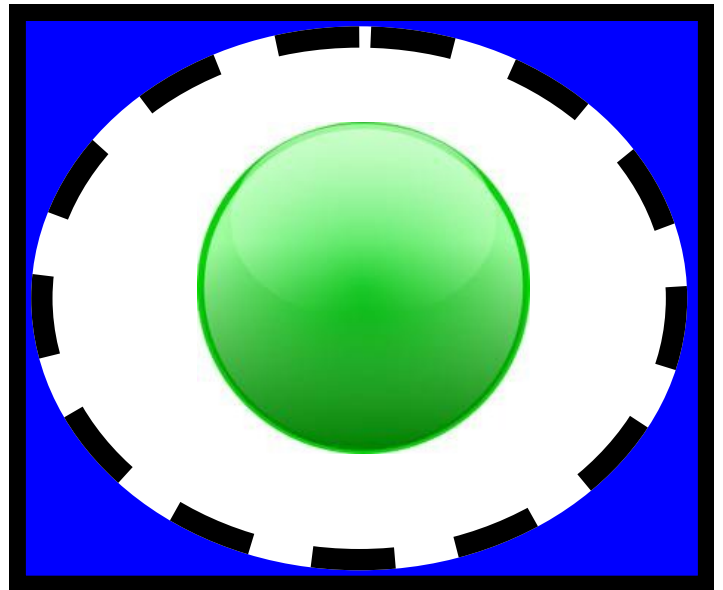

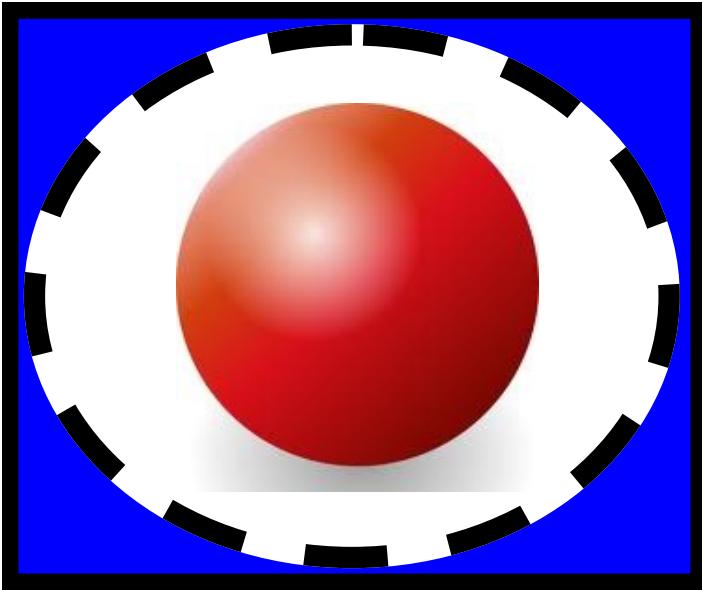

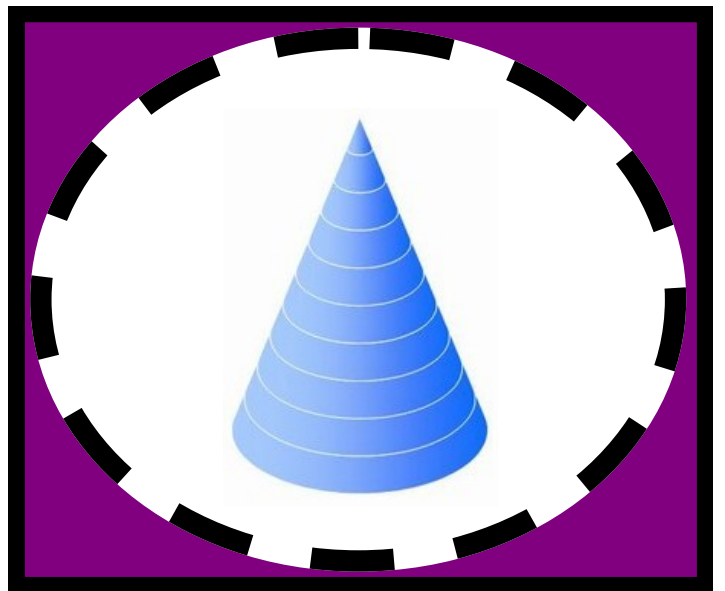

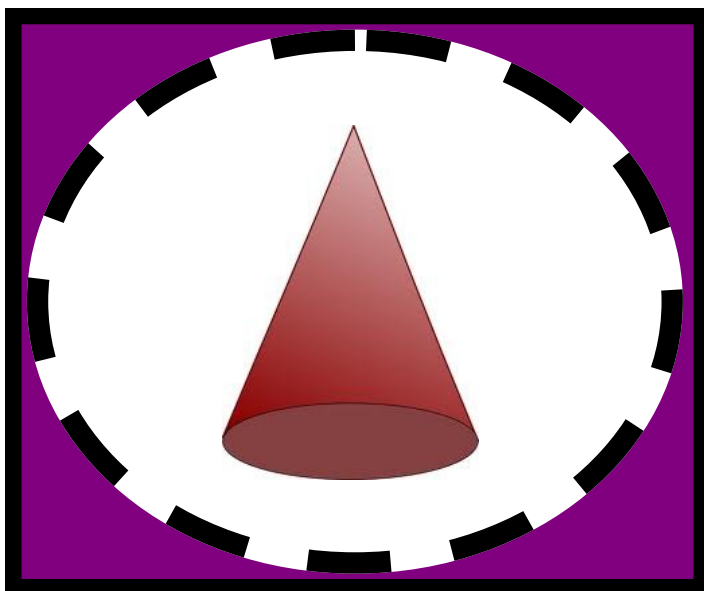

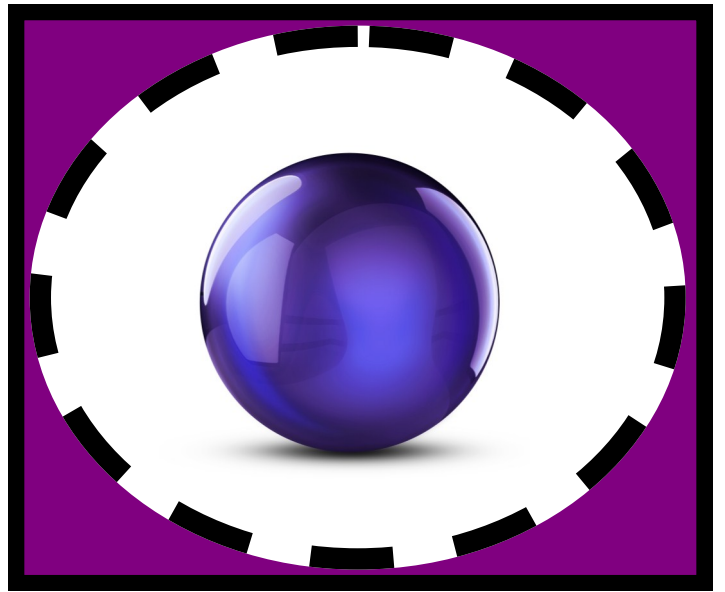

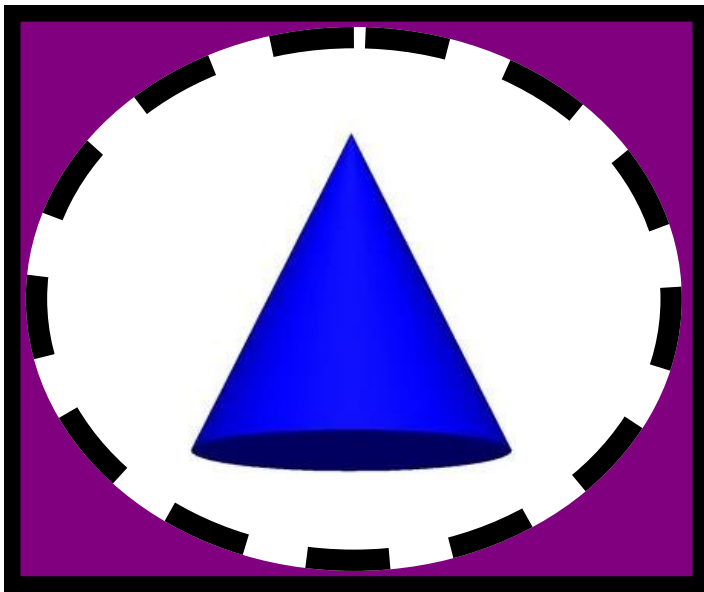

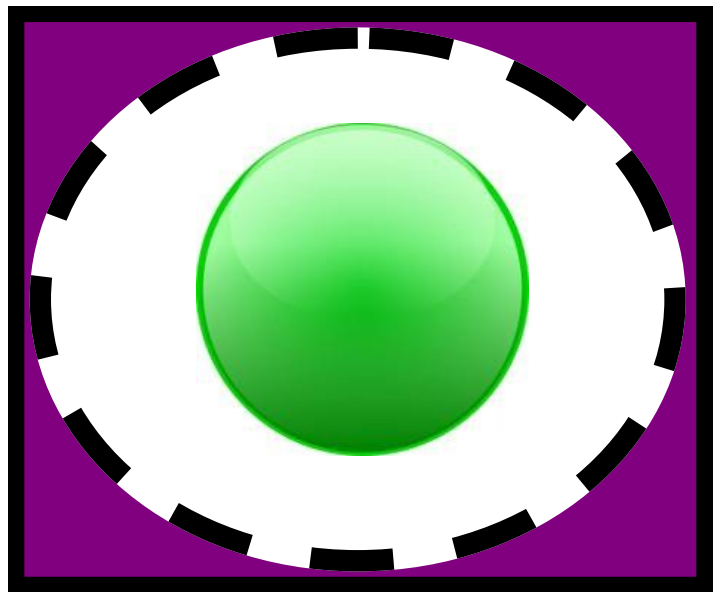

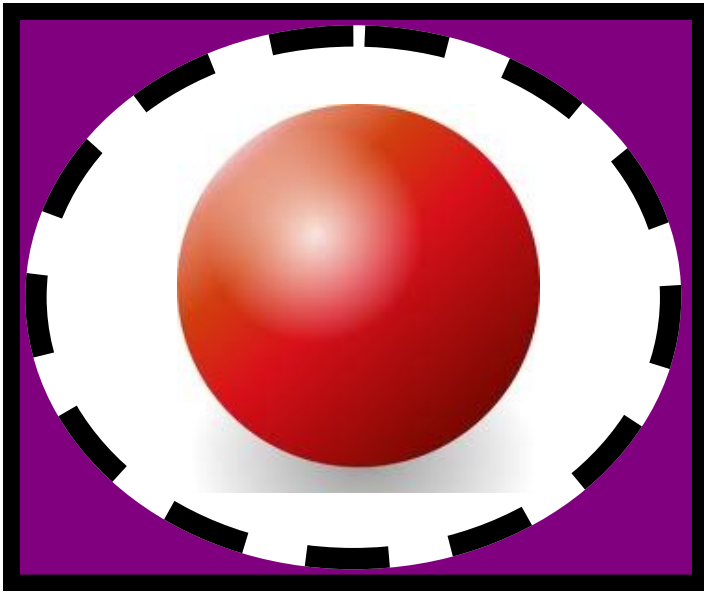

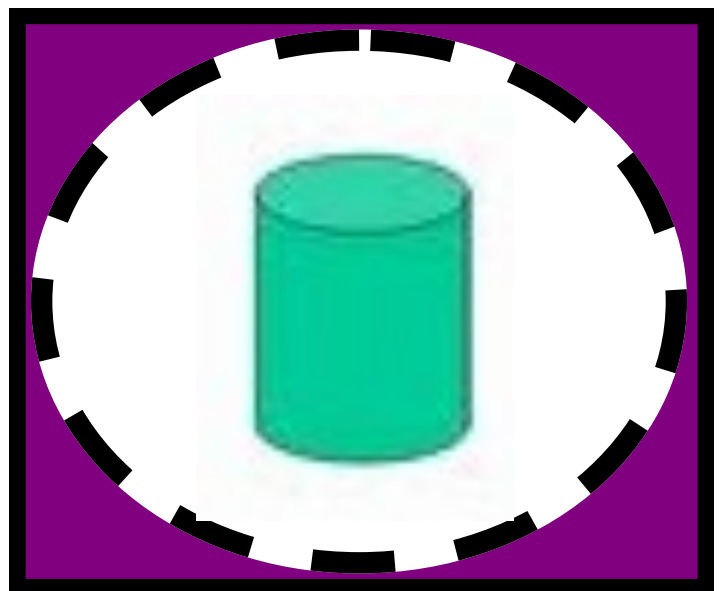

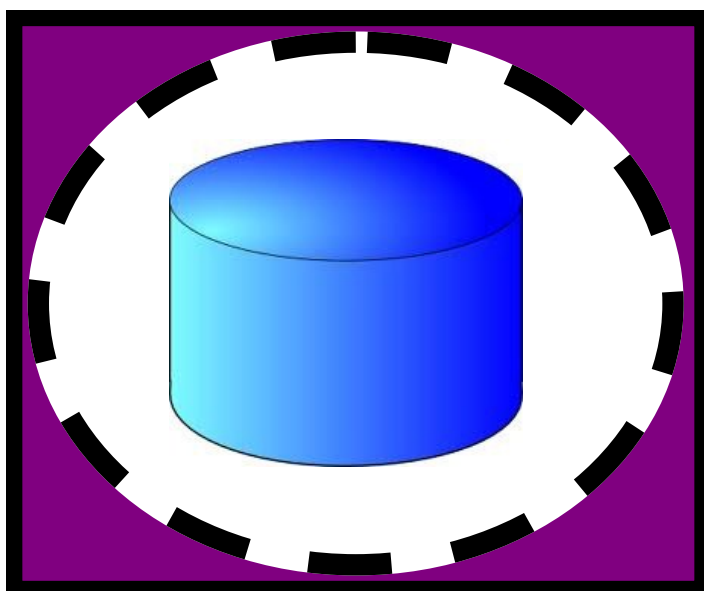

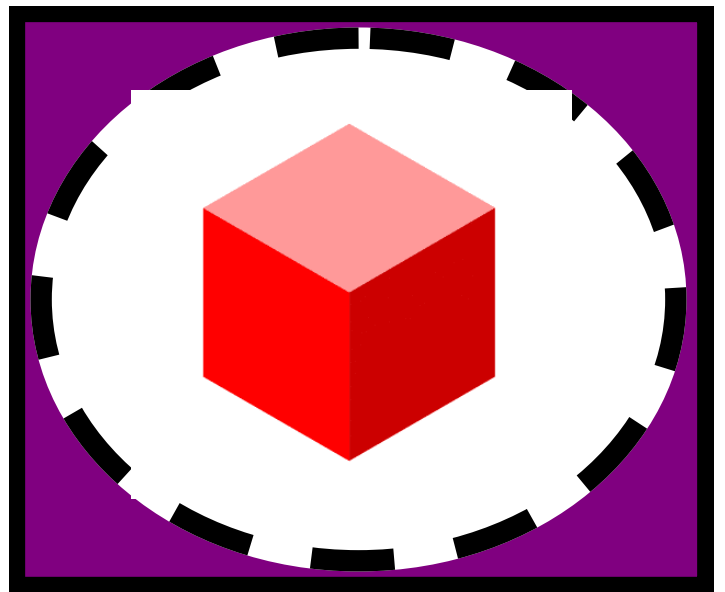

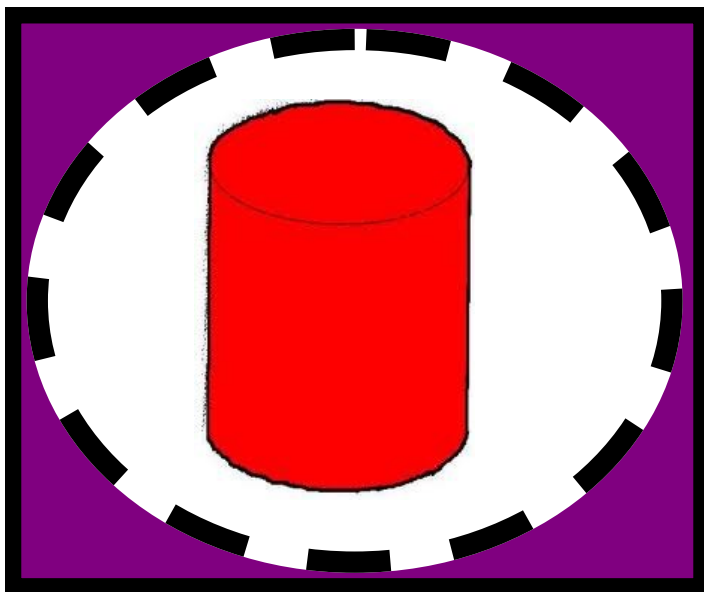

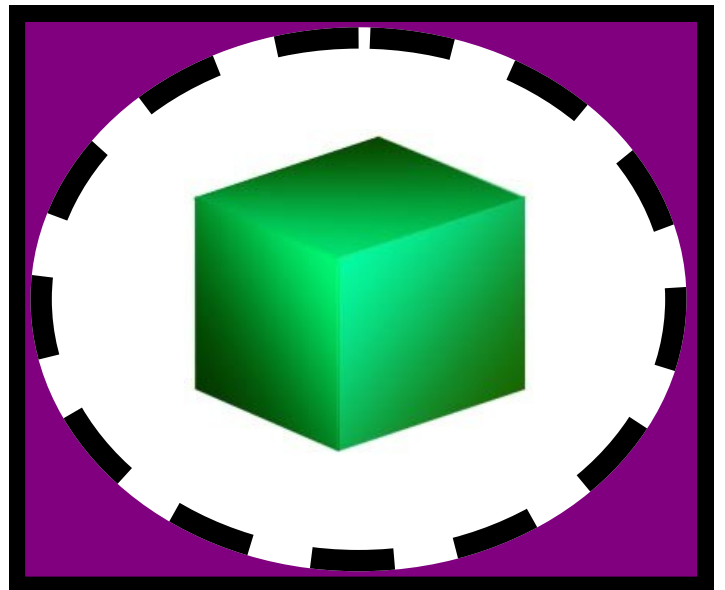

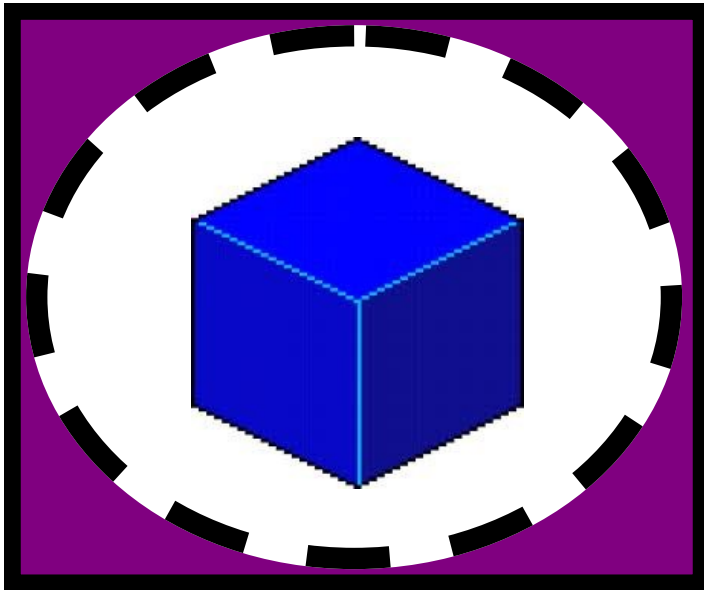

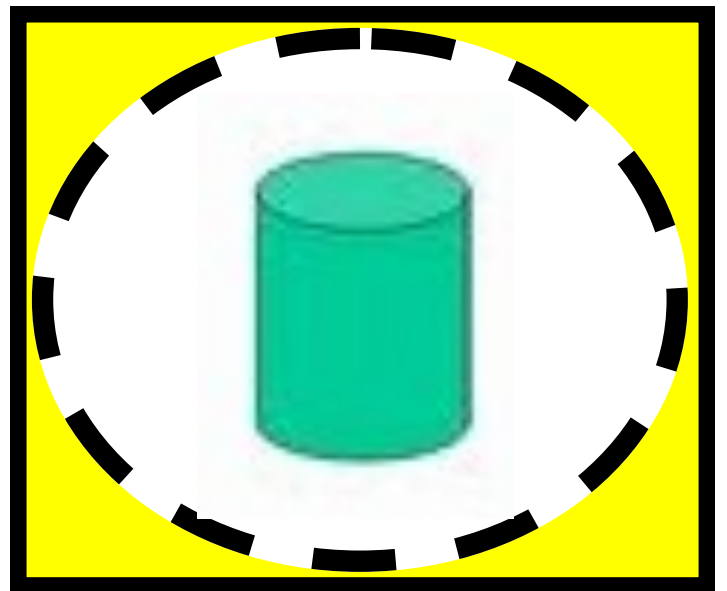

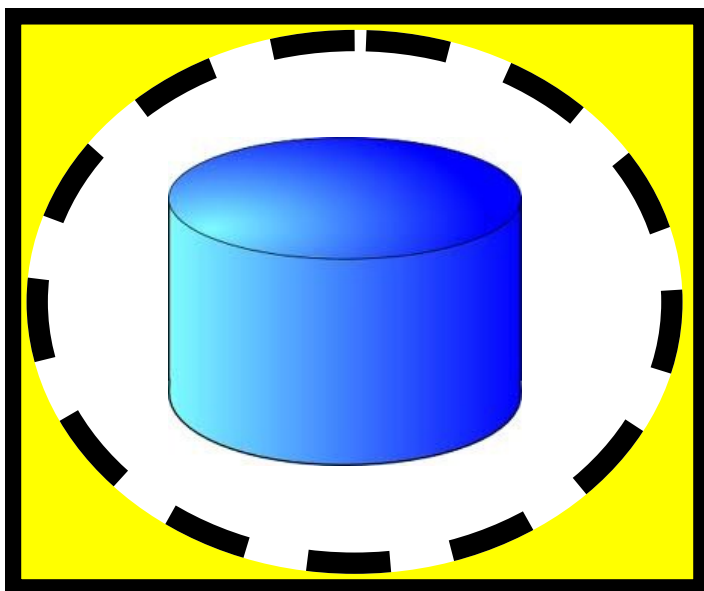

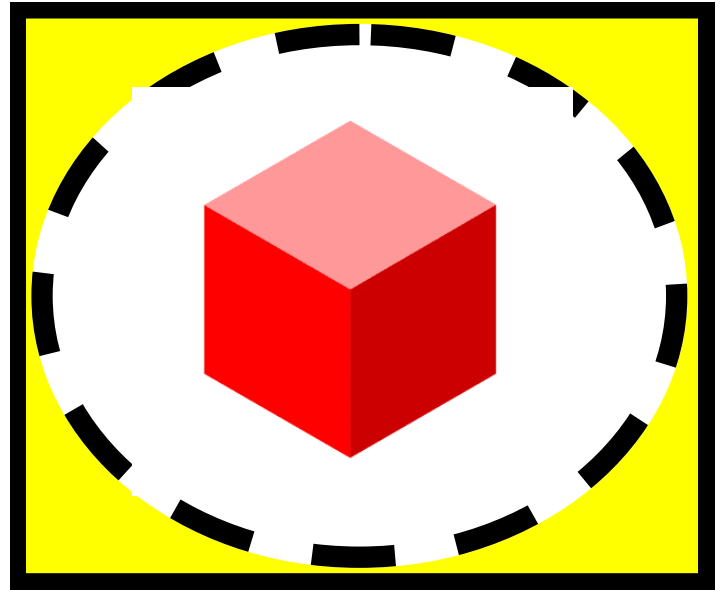

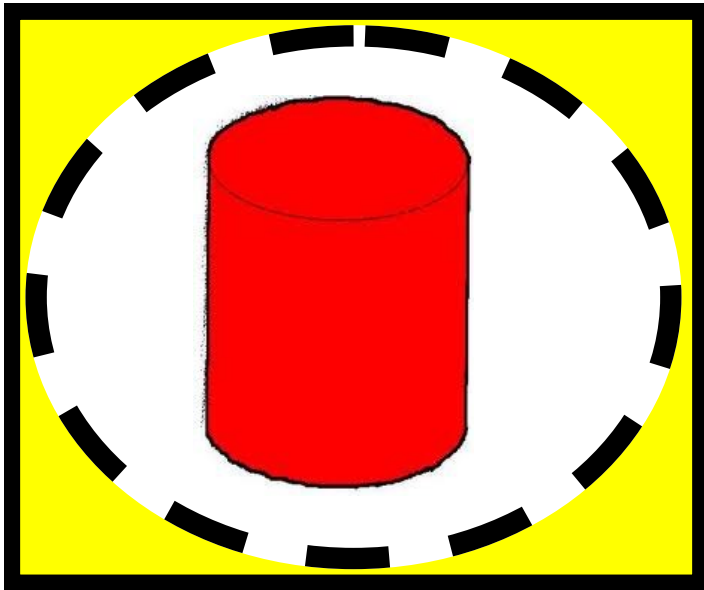

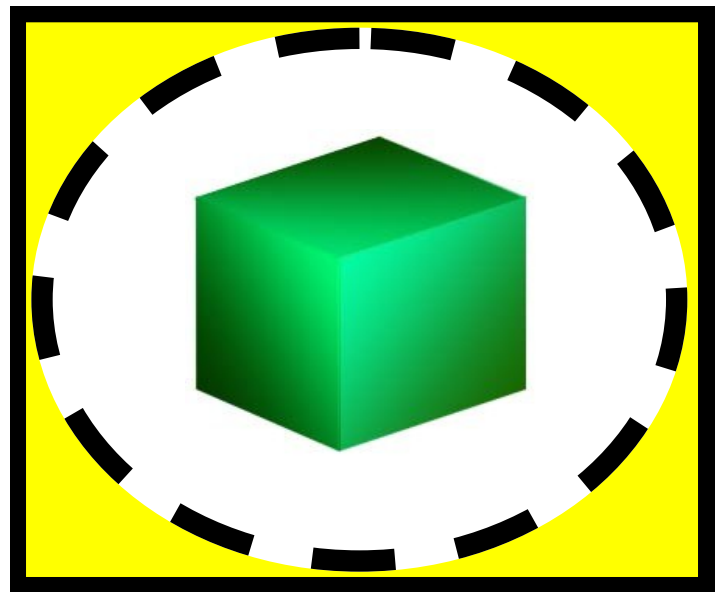

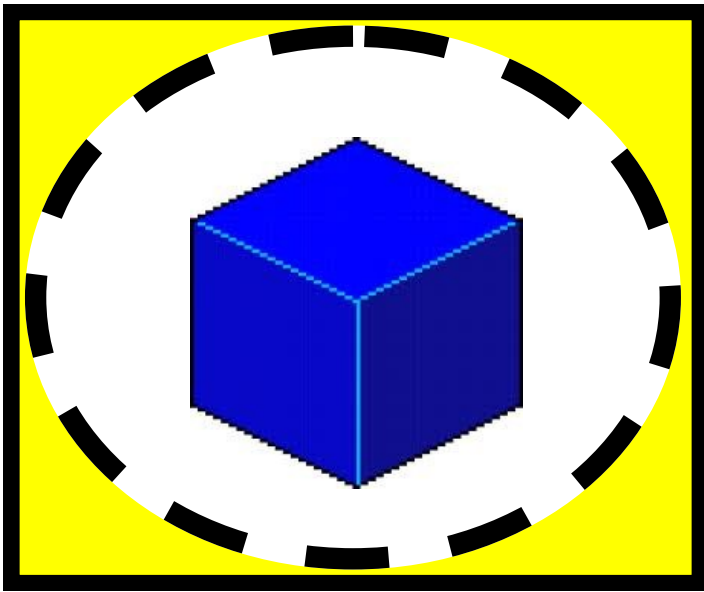

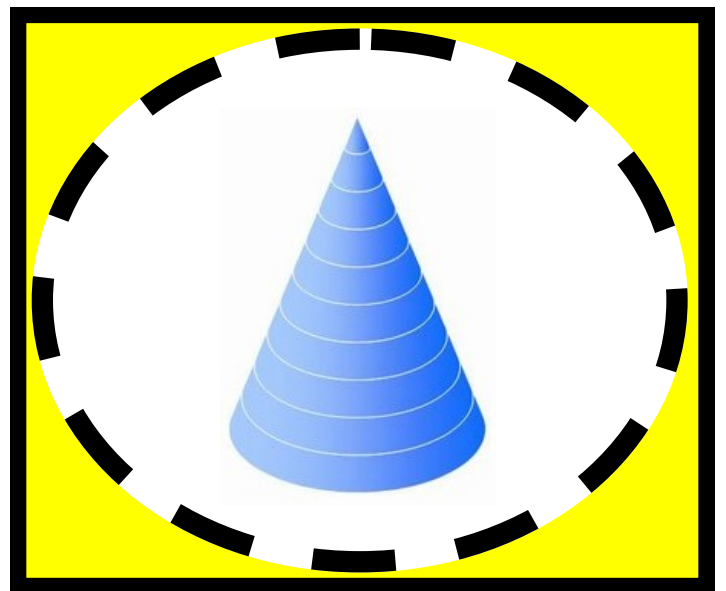

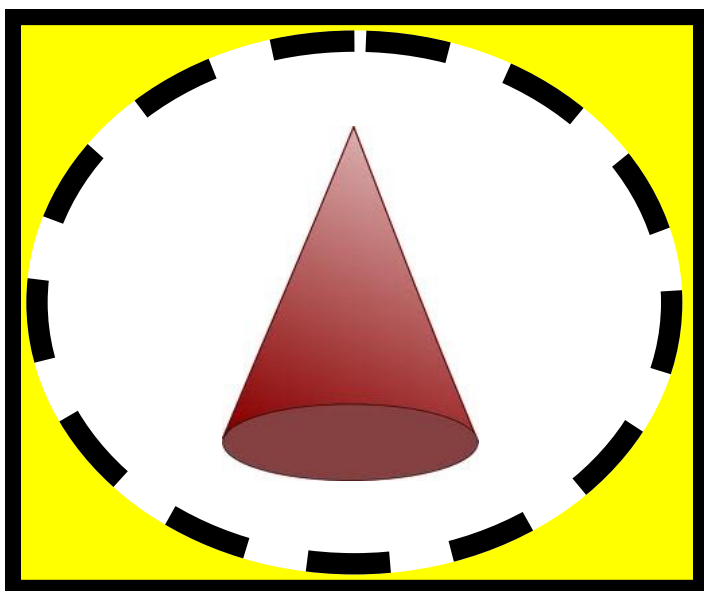

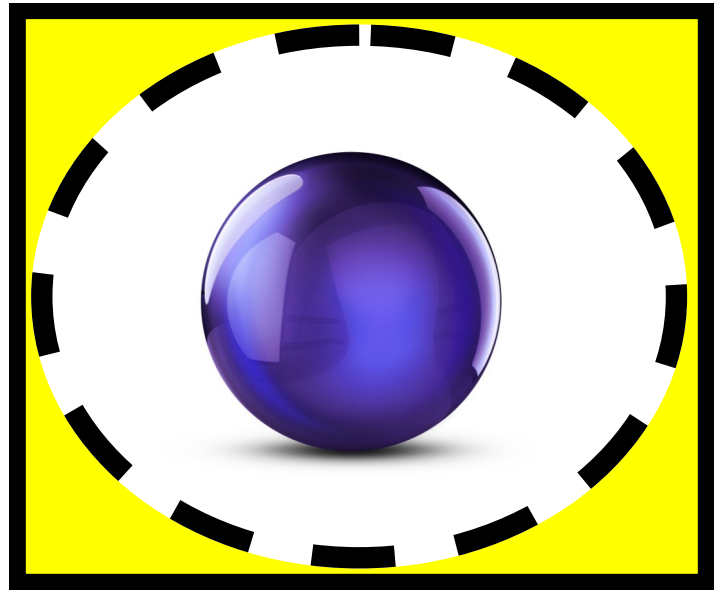

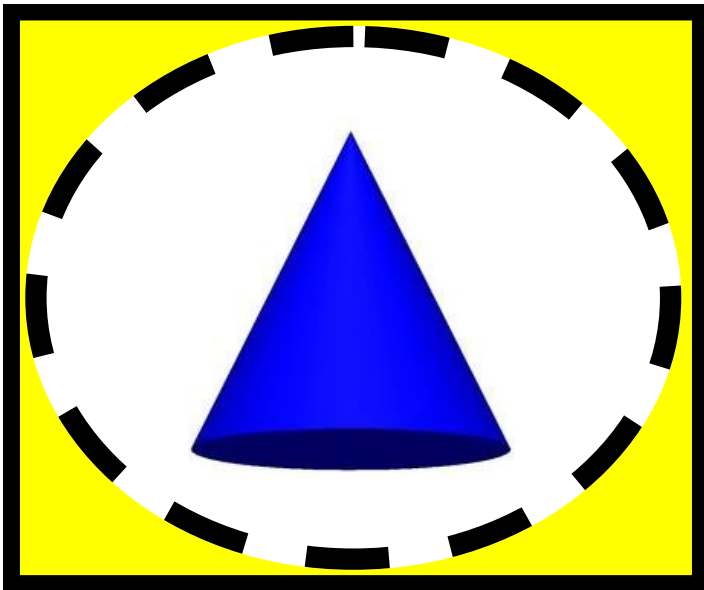

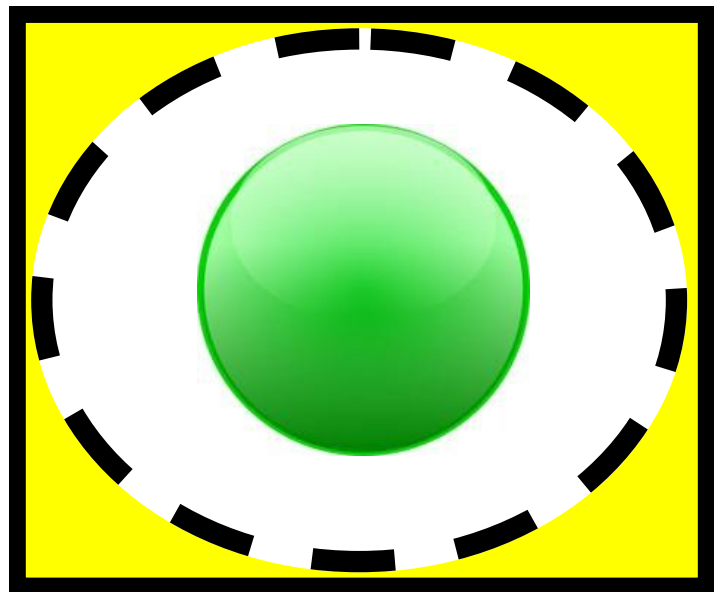

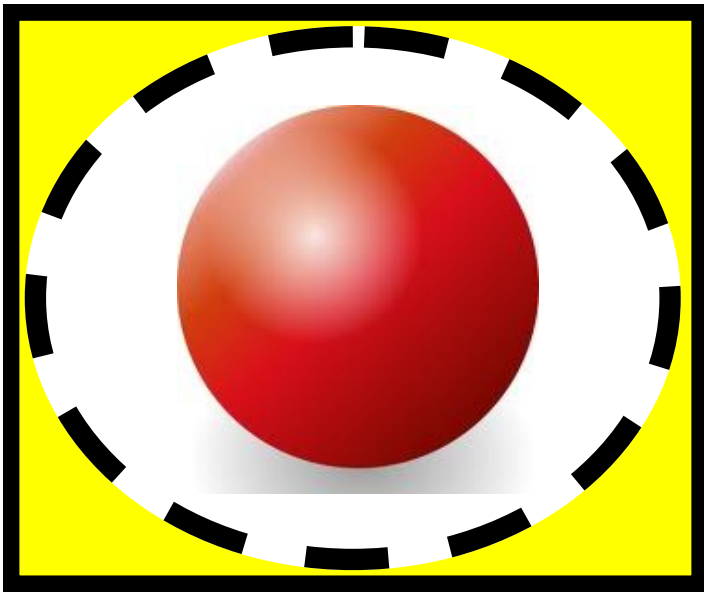

Thank you for downloading  
this freebie! Please con-  
tact me if you have any  
questions about these  
games and please leave  
your feedback. You can see  
more ideas at my blog:
